

KSI's Global Facilities Management System (GFMS™) Offers versatile options for integration with the systems your facility currently has in operation. We offer custom solutions for data sharing with existing employee databases, building access control, and facilities monitoring systems.

Our GFMS™ Integrator, GFMS™ Sync tool, and Security Asset Manager™ XML API each offer unique features at varying levels of integration. All of these applications aim to increase security while saving time and costs for your administrative personnel.

Integrated Products Include:

Lenel - OnGuard®
 AMAG Technology - Symmetry™
 Software House - C•Cure
 Galaxy Control Systems - System Galaxy Cardax®

Hirsch - Velocity
 Stanley®
 Panasonic®
 RS2® - Access It!®

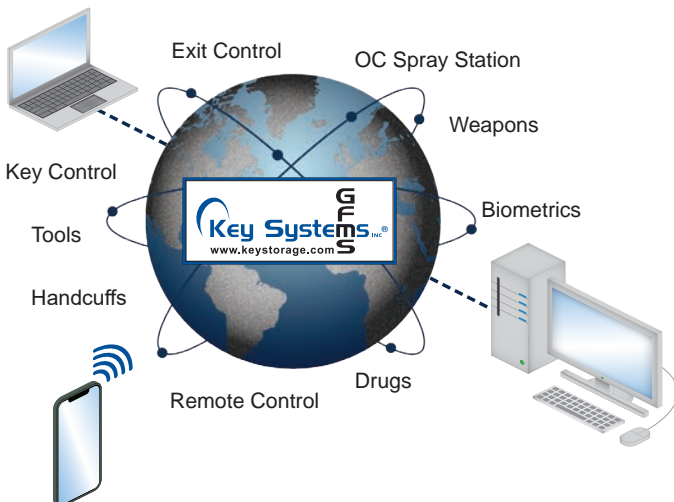

B.A.S.I.S.™
 WiQ™
 UltraTime
 Gallagher

Key Systems Inc. GFMS™ is certified through OnGuard 7.5. OnGuard is a registered trademark of Lenel.

Global Facilities Management System

GFMS™ combines sophisticated and adaptable, web enabled, PC-based software with no client installs. Dynamic integration and custom application are cornerstones of our philosophy towards system management.

Key Systems, Inc. will help you formulate an asset management strategy specific to your facility's requirements, regardless of size, scope and pre-existing technology.

System Requirements:

- Microsoft® Windows Server® 2019 / 2016 / 2014 / 2012 / 2008 R2 / Microsoft® Windows® 8 / 8.1 / 10
- 5 GB hard disk space reserved for database
- 2 GB RAM
- 100 Mbps wired network connection

GFMS Sync Tool & Third Party Applications

- Access Control
- Human Resources
- Exit Control
- Payroll
- Time & Attendance

Existing Database
Such as:

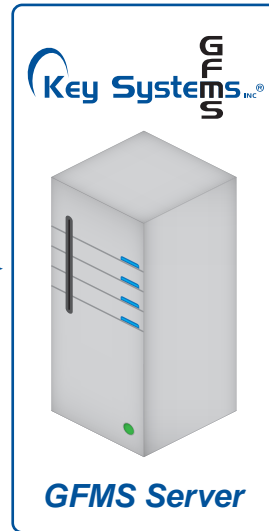

- Fire Systems
- Video Systems
- Building Management
- CRM
- Incident Reporting

GFMS Sync Tool is a versatile tool that sets up your GFMS assets - keys, lockers, laptops, tools or anything you can control with GFMS - for management through your existing system.

- User Data
- Groups/Roles

GFMS Sync Tool automates the assignment of access to your assets and the updating of employee information, eliminating wasted time and administrative headaches.

- Coordinate your existing scheduling and access tools with our Security Asset Managers
- Reduce administrative time while eliminating data entry errors
- Increase security by ensuring consistent data across your access control environment
- Enroll, update, and remove access to assets using your existing application

GFMS Integrator

- Access Control
- Human Resources
- Exit Control
- Payroll
- Time & Attendance

Existing Database
Such as:

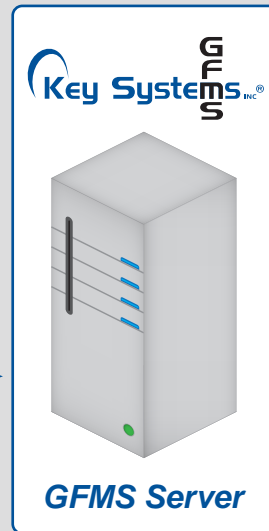

- Fire Systems
- Video Systems
- Building Management
- CRM
- Incident Reporting

GFMS Integrator places complete management of you assets within your existing software system. View reports and event data in your system and program access to assets as well.

- User Data
- Groups/Roles
- Asset Inventory
- Real Time Event Data

Key Systems, Inc. offers off-the-shelf solutions for a variety of products, such as Lenel OnGuard® and AMAG Symmetry, but GFMS Integrator makes end-user customization possible so you can tailor our products to fit your needs.

- Real time event and alarm data sent to your existing system to support advanced features, such as anti-passback and exit control, as well as reporting and event processing of GFMS assets in your existing system.
- Complete programming control of user and access data
- Please contact us to explore how GFMS Integrator can meet your integration needs

- Such As:**
- Reports
 - Real Time Event Data
 - Email/Text Messages
 - Asset Inventory
 - Asset Reservation
 - Time Zones
 - Timers
 - Site Map
 - Groups / Roles
 - Rules Engine
 - SAM Manager
 - Biometrics
 - Software Partitioning
 - Encryption

Security Asset Manager XML API

For developers, the SAM XML API offers the opportunity to completely control our Security Asset Managers through your custom application.

Third Party Application

SAM XML API

- User Data
- Groups/Roles
- Asset Inventory
- Real Time Event Data
- Rules Engine
- Asset Reservation

- SAM XML API is the platform through which developers may manage and control GFMS SAM devices
- A developer may choose to utilize SAM XML API if they wish GFMS software to not be part of their system
- The SAM XML API is also how GFMS software controls and manages the SAM
