# Security Asset Manager - SAM SRP

Our sturdy Security Asset Manager (SAM) cabinets can be configured with over 400 hooks. The secure ID login system monitors who is accessing the cabinet.

Security. Accountability. Efficiency.

Each user enters his or her own PIN code to deposit or withdraw keys. Our Global Facilities Management Systems (GFMS) software allows for transaction logs and other reporting methods.

With hooks that accommodate virtually any style of key ring, users can store and retrieve keys quickly and easily. Each SAM SRP comes with replaceable keytags for key identification.

The panels have a dry erase finish and each SAM SRP comes with a dry erase pen.
